

Platinum™ Technology Overview

PLATINUM TECHNOLOGY

POWERRISE® WITH PLATINUM TECHNOLOGY

Introduction

PowerRise® 2.0 and 2.1 with Platinum™ Technology are the motorized wireless control systems from Hunter Douglas used for raising, lowering and vane adjustment on our window covering products. The systems are built with patented Platinum Technology communication that uses both radio wave signals and infrared signals to operate.

Wirelessly operate a single shade or groups of window coverings from the Platinum remote and wireless wall switch. Or control your PowerRise window coverings through dry contact relays using the connection interface module. Choose the right control method to meet any project's needs.

Features of the PowerRise 2.0 and 2.1 Systems

- Quieter, powerful motor system.
- Improved performance and reliability.
- Increased battery life — 1 year minimum on the largest shades.
- All PowerRise window coverings can be reset either from the Platinum remote or from the manual control button.
- Home automation integration is available.

POWERGLIDE® WITH PLATINUM TECHNOLOGY

Introduction

PowerGlide® 2.0 and 2.1 with Platinum Technology are the motorized wireless control systems from Hunter Douglas offered with Luminette® Privacy Sheers and Modern Draperies, as well as Skyline® Gliding Window Panels. The systems feature a quiet, modular motor and patented Platinum Technology communication that uses both radio wave signals and infrared signals to operate window coverings.

Wirelessly operate individual products or groups of products from the Platinum remote or Platinum wireless wall switch. Or control your PowerGlide products through dry contact relays using the connection interface module. Choose the right control method to meet any project's needs.

Features of the PowerGlide 2.0 and 2.1 Systems

- Quiet, powerful motor system.
- Detachable motor for easier installation.
- Works with all Platinum Technology transmitters.
- Home automation integration is available.

POWERTILT™ WITH PLATINUM TECHNOLOGY

Introduction

PowerTilt™ with Platinum Technology is the motorized wireless control system from Hunter Douglas used to tilt the slats of horizontal blinds for the ultimate in light control. Built with patented Platinum Technology communication that uses both radio wave signals and infrared signals to operate window coverings, PowerTilt products take light control to a whole new level.

Wirelessly operate a single blind or groups of blinds at the same time from the Platinum remote or wireless wall switch. Or control your PowerTilt product through dry contact relays using the connection interface module. Choose the right control method to meet any project's needs.

Features of the PowerTilt System

- Precise slat tilting.
- Works with all Platinum Technology transmitters.
- Home automation integration is available.
